

The consultation session is designed to assist participants in identifying the most suitable key performance indicators (KPIs) for their case study and effectively measuring them. By focusing on circular practices, this session aims to enhance participants' understanding of how to evaluate their operations through a sustainable lens.

Through this consultation, we will:

1. **Assess Existing Operations:** We will conduct a thorough analysis of current operations to pinpoint potential areas where circular practices can be implemented. This assessment may cover various aspects, including end-of-life considerations, product design, manufacturing processes, and supply chain management. By understanding these components, participants can better identify opportunities for integrating circularity into their business models.
2. **Assign Measurable Objectives (KPIs):** Participants will learn to establish measurable objectives that align with their circular business model. These KPIs may include metrics related to customer satisfaction, waste minimization, resource efficiency, and more. By setting these objectives, participants can effectively assess the efficacy of their circular practices. Regular monitoring and evaluation of progress against these KPIs will help identify areas for improvement and drive ongoing enhancements.
3. **Address Questions on Measurement and Integration:** The consultation will provide a platform for participants to ask questions regarding the measurement of these KPIs and their integration into their business or case study models. This open dialogue will ensure that participants leave with a clear understanding of how to implement and track their selected KPIs effectively.

By the end of the session, participants will be equipped with the tools and knowledge needed to create a robust framework for measuring their progress in adopting circular practices. This approach not only promotes sustainability but also enhances overall business performance by aligning operations with the principles of a circular economy.

Consultation on how to measure CE KPIs
